

PATENT
B422-147A (25813.157)

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant(s) : Tetsuya Shimizu
Serial No. : 09/836,838
For : IMAGE PROCESSING APPARATUS AND IMAGE PROCESSING METHOD
Filed : April 18, 2001
Examiner : Jamie J. Vent
Art Unit : 2621

Mail Stop Petition
Commissioner for Patents
P.O. Box 1450
Alexandria VA 22313-1450

Sir:

PETITION TO WITHDRAW HOLDING OF ABANDONMENT UNDER
37 CFR § 1.181

Applicant's undersigned attorney is the attorney of record in the above-identified application Serial No. 09/836,838 (Attorney Docket No. B422-147A and/or 25813.157), filed on April 18, 2001. On or about August 21, 2008, applicant's undersigned attorney was advised by the docketing department in applicant's undersigned attorney's law firm, Cowan, Liebowitz & Latman, 1133 Avenue of the Americas, New York, N.Y. 10036, that a scheduled status check of the above-identified application conducted using the United States Patent and Trademark Office's (USPTO's) Patent Application Information Retrieval system (PAIR) showed that an Office Action had issued in the application and had been mailed by the USPTO on February 6, 2008. The Office Action, as can be seen from the attached copy retrieved from

I hereby certify that this correspondence is being transmitted via the Patent Electronic Filing System (EFS) to the United States Patent and Trademark Office on the date shown below:

JOHN J. TORRENTI
Signature
September 17, 2008
Date of Signature

the PAIR system, was addressed to applicant's undersigned attorney and the above firm at the above address, which is the correspondence address of record for the subject application.

The PAIR system also showed that the Office Action had been returned by the US Postal Service to the mail room of the USPTO on February 19, 2008. A copy of the returned Office Action, also retrieved from the PAIR system, is attached and it shows on the last page with the "Returned" stamp a note that "Not Shearman & Sterling LLP Mail." It is believed that the US Postal Service delivered the Office Action to the wrong law firm, Shearman & Sterling, instead of Cowan, Liebowitz & Latman (there is no Sherman & Sterling law firm at the above address of the Cowan, Liebowitz & Latman firm), and the mail was returned by that firm to the US Postal Service, who, in turn, returned it to the USPTO as undeliverable.

Based on the above, applicant's undersigned attorney contacted the Examiner in the application during the week of September 1, 2008 to clarify the situation and to determine what action should be taken to rectify it. The Examiner advised that the Examiner would have to confer with the Examiner's supervisor who was out of the Office and would return the week of September 8, 2008. The Examiner telephoned applicant's undersigned attorney during the week of September 8, 2008 and advised that after conferring with the Examiner's supervisor, it was concluded that the application had become technically abandoned on August 6, 2008 and that applicant would have file a petition to have the application reinstated.

The subject Petition is being filed for that purpose and applicant respectfully requests that the abandonment of the application be withdrawn for failure of applicant to receive the February 6, 2008 Office Action. In support of this Petition, applicant has submitted the above-mentioned copies of the February 6, 2008 Office Action and the returned February 6, 2008 Office Action retrieved by applicant's undersigned attorney's office from the USPTO's PAIR

system. Applicant also in compliance with the requirements set forth in MPEP § 711.03(c) offers the following additional support for the Petition:

- 1) Applicant's undersigned attorney states that the February 6, 2008 Office Action was not received at the correspondence address of record, i.e., Cowan, Liebowitz & Latman, 1133 Avenue of the Americas, New York, NY 10036.
- 2) Applicant's undersigned attorney further states that a search of applicant's undersigned attorney's records including the file jacket of the subject application and the application contents indicates that the February 6, 2008 Office Action was not received.
- 3) Applicant's undersigned attorney's office uses a commercially available docketing system referred to as PATTSY distributed by OP Solutions for docketing patent applications filed through applicant's undersigned attorney's office and this docketing system is believed to be widely used and known in the industry to be reliable.
- 4) The PATTSY system docket applications using entries which include attorney docket numbers, application serial numbers, application filing dates, Office Action mail dates and Office Action response dates.
- 5) Applicant's undersigned attorney has included herewith a copy of the docket sheet attached to the file of subject application printed from the PATTSY system and it includes the Serial No. of the application (09/836,838), its filing date (04/18/2001) and two attorney docket numbers (25813.157 and B422-147A), the latter one of which appears on the February 6, 2008 Office Action.

- 6) The aforementioned docket sheet indicates in the ACTION Column actions that have to be taken. One ACTION is a RESPONSE to OA which indicates that an Office Action has to be responded to. Adjacent the ACTION Column is a BASE Column which for a RESPONSE to OA indicates the date an Office Action is received. Also, a DUE Column for a RESPONSE to OA identifies the 3 month due date and a FINAL Column identifies the 6 month final due date.
- 7) As can be seen from the docket sheet, the last entry for a RESPONSE to OA is for an Office Action received on 08/23/07. This Office Action was responded to on 11/21/2007. The docket sheet also shows as the last entry on the second page a STATUS CHECK having 11/21/2007 as the BASE date and 08/21/08 as the due date. As stated previously, it was on or about the latter date that applicant's undersigned attorney's docketing department checked the file of the subject application in the USPTO's PAIR system and uncovered the February 6, 2008 Office Action.
- 8) A copy of pages 7-21 of the Consolidated Docket For John J. Torrente, applicant's undersigned attorney, printed on 05/01/2008 from the PATTSY docketing system and showing docket entries for May 2008 is also attached. The Consolidated Docket shows for responses due on 05/06/08 (the due date where the February 6, 2008 Office Action would have been entered had it been received), no entry for attorney Docket No 25813.157 or B422-147A or for Application serial No. 09/836,838, all of which correspond to the subject application. This is further confirmed by the enclosed copy of the Patent User

Action Report By Due Date for John J. Torrente, printed on 05/02/08 from the PATTSY system for items due for the period 05/03/2008 through 05/11/2008. In particular, this Report shows no entries or responses due on 05/06/08 for attorney Docket No 25813.157 or B422-147A or for Application serial No. 09/836,838.

- 9) Also enclosed are copies of Patent User Action Report By Due Date for the other attorneys in applicant's undersigned attorney's firm, i.e., Mark Montague, Loyd McAulay, Eugene Flanagan, Catriona Collins and Lewis Gable, printed on 05/02/08 from the PATTSY system for items due for the period 05/03/2008 through 05/11/2008. These Reports likewise show no entries or responses due on 05/06/08 for attorney Docket No 25813.157 or B422-147A or for Application serial No. 09/836,838, again confirming lack of receipt of the February 6, 2008 Office Action.

In view of the above, it is submitted that the February 6, 2008 Office Action was not received at the correspondence address of record in the subject application. Accordingly, it is respectfully requested that the holding of abandonment of the subject application be withdrawn for failure to receive such Office Action.

Applicant notes also that applicant intends to file a request to treat this Petition as a Petition For Revival Of An Application For Patent Unavoidably Abandoned Under 37 CFR 1.137(a), in the event that this Petition is not granted. Applicant will file such a request shortly along with the necessary response materials needed to support a petition under 37 CFR 1.137(a).

Please charge any fees for entry and consideration of this Petition to our Deposit
Account 03-3415.

Dated: September 17, 2008

Respectfully submitted,

COWAN, LIEBOWITZ & LATMAN, P. C.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 November 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 4-8 and 11-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 4-8, 11-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 4-8, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable by Choi et al (US 6,285,408) in view of Hazra (US 6,510,553) in further view of Xue et al (US 6,711,181).

[claim 1]

In regard to Claims 1 and 8, Choi et al discloses an image processing apparatus and method comprising:

- A reception unit that receives at least three encoded image data via a data bus (Figure 5 tuners 101 and 102 receive plural image data information as further described in Column 4 Lines 6-12. Additionally encoded image data is received into the system through the DVD system 301 and the tape recording/reproducing 401 system as further seen in Figure 5). Additionally it is noted in Figure 4 and 5 and described in Column 2 Lines

30-44 the use of a data bus for transferring of data between units of the system is discussed);

- decoding unit that decodes one of said encoded image data to generate a main frame (Column 4 Lines 7-34 allows for main frame generation for decoding plural image data and as further seen in Figure 5 HD-video decoder 104 and SD-video decoder 204);
- an image signal generation unit adapted to generate an image signal including said main frame and said subframe (Figure 4 shows the outputting means for outputting a main frame and a sub frame); however, fails to disclose a receiving encoded data via a serial bus and sub frame generating unit that extracts low frequency component extracted from each one of the other encoded image data and a sub frame generation unit adapted to extract low frequency component from each one of the other encoded image data, and generate sub frames using the low frequency components from the other encoded image data and an image signal generation unit adapted to combine the main frame and the generated sub frames and generate an image signal including the main frame combined with the generated sub frames.

Xue et al teaches a system wherein serial data bus are used in order to properly transmit and receive data as described in Column 4 Lines 58+. The serial bus is seen in Figure 3 and described in Column 5 Lines 47-67 for transmitting and receiving data into the system and thereby provide an efficient and effective transmission of data

to the system. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use image processing apparatus, as disclosed by Choi et al, and further incorporate the use of serial bus as a transmission and receiving method to the system, as taught by Xue et al, to provide the data and efficient and effective method of receiving data to the system.

Choi et al in view of Xue et al discloses a system for receiving data; however, fails to disclose sub frame generation from the signal. It is taught by Hazra et al to provide a system wherein the base layer (sub frames) are determined by low frequency to become the main frame as described in Column 7 Lines 25-50 and further seen in Figure 3. The base layers are displayed and further generated and extracted based on the frequency and thereby allows for the switching of sub frames to main frames. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use an image processing system, as disclosed by Choi et al in view of Xue et al, and further incorporate a system wherein sub frame generation is used for extraction of the encoded image, as described by Hayashi et al, and further incorporate the generation of sub frames through the use of low frequency to provide a better quality image that allows for main frames and sub frames to be combined to display and generate various frames, as recited in Hazra.

[claim 4]

In regard to Claim 4, Choi et al discloses an apparatus and method wherein said reception means is an interface based on the IEEE1394-1995 standard (Figure 4 shows the connection of the serial bus based on the IEEE 1394-1995 standard as

further described in Column 2 Lines 30-44). It is additionally taught by Xue et al to contain a system wherein serial data bus under IEEE 1394-1995 standard is used in order to properly transmit and receive data as described in Column 4 Lines 58+.

[claim 5]

In regard to Claim 5, Choi et al discloses an apparatus and method further comprising: switch unit adapted to switch the encoded image data corresponding the main frame and the encoded image data corresponding to one of said sub frames in response to an operation of a predetermined operation key. (Column3 Lines 55+ describes the user selecting the display information either being main frame or sub-frame and thereby switching the image data on the display means).

[claim 6]

In regard to Claim 6, Choi et al discloses an apparatus and method further comprising: recording unit adapted to record the encoded image data corresponding to main frame on a storage medium, in response to an operation of a predetermined operation key (Figure 5 element 401 shows the recording apparatus used to record information as further described in Column 7 Lines 33-45).

[claim 7]

In regard to Claim 7, Choi et al discloses an apparatus and method wherein said at least three encoded image data are based SD format of the DV standard (Column 2 Lines 3-12 describes the plural images that are based on the SD format).

[claim 8]

In regard to Claim 8, the claim limitations have been previously discussed in Claim 1.

[claim 11]

In regard to Claim 11, the claim limitations have been previously discussed in Claim 4.

[claim 12]

In regard to Claim 12, the claim limitations have been previously discussed in Claim 5.

[claim 13]

In regard to Claim 13, the claim limitations have been previously discussed in Claim 6.

[claim 14]

In regard to Claim 14, the claim limitations have been previously discussed in Claim 7.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Contact Information

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jamie Vent whose telephone number is 571-272-7384. The examiner can normally be reached on 7:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Miller can be reached on 571-272-7353. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 4-8, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable by Choi et al (US 6,285,408) in view of Hazra (US 6,510,553) in further view of Xue et al (US 6,711,181).

[claim 1]

In regard to Claims 1 and 8, Choi et al discloses an image processing apparatus and method comprising:

- A reception unit that receives at least three encoded image data via a data bus (Figure 5 tuners 101 and 102 receive plural image data information as further described in Column 4 Lines 6-12. Additionally encoded image data is received into the system through the DVD system 301 and the tape recording/reproducing 401 system as further seen in Figure 5). Additionally it is noted in Figure 4 and 5 and described in Column 2 Lines

30-44 the use of a data bus for transferring of data between units of the system is discussed);

- decoding unit that decodes one of said encoded image data to generate a main frame (Column 4 Lines 7-34 allows for main frame generation for decoding plural image data and as further seen in Figure 5 HD-video decoder 104 and SD-video decoder 204);
- an image signal generation unit adapted to generate an image signal including said main frame and said subframe (Figure 4 shows the outputting means for outputting a main frame and a sub frame); however, fails to disclose a receiving encoded data via a serial bus and sub frame generating unit that extracts low frequency component extracted from each one of the other encoded image data and a sub frame generation unit adapted to extract low frequency component from each one of the other encoded image data, and generate sub frames using the low frequency components from the other encoded image data and an image signal generation unit adapted to combine the main frame and the generated sub frames and generate an image signal including the main frame combined with the generated sub frames.

Xue et al teaches a system wherein serial data bus are used in order to properly transmit and receive data as described in Column 4 Lines 58+. The serial bus is seen in Figure 3 and described in Column 5 Lines 47-67 for transmitting and receiving data into the system and thereby provide and an efficient and effective transmission of data

to the system. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use image processing apparatus, as disclosed by Choi et al, and further incorporate the use of serial bus as a transmission and receiving method to the system, as taught by Xue et al, to provide the data and efficient and effective method of receiving data to the system.

Choi et al in view of Xue et al discloses a system for receiving data; however, fails to disclose sub frame generation from the signal: It is taught by Hazra et al to provide a system wherein the base layer (sub frames) are determined by low frequency to become the main frame as described in Column 7 Lines 25-50 and further seen in Figure 3. The base layers are displayed and further generated and extracted based on the frequency and thereby allows for the switching of sub frames to main frames. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use an image processing system, as disclosed by Choi et al in view of Xue et al, and further incorporate a system wherein sub frame generation is used for extraction of the encoded image, as described by Hayashi et al, and further incorporate the generation of sub frames through the use of low frequency to provide a better quality image that allows for main frames and sub frames to be combined to display and generate various frames, as recited in Hazra.

[claim 4]

In regard to Claim 4, Choi et al discloses an apparatus and method wherein said reception means is an interface based on the IEEE1394-1995 standard (Figure 4 shows the connection of the serial bus based on the IEEE 1394-1995 standard as

further described in Column 2 Lines 30-44). It is additionally taught by Xue et al to contain a system wherein serial data bus under IEEE 1394-1995 standard is used in order to properly transmit and receive data as described in Column 4 Lines 58+.

[claim 5]

In regard to Claim 5, Choi et al discloses an apparatus and method further comprising: switch unit adapted to switch the encoded image data corresponding the main frame and the encoded image data corresponding to one of said sub frames in response to an operation of a predetermined operation key. (Column 3 Lines 55+ describes the user selecting the display information either being main frame or sub-frame and thereby switching the image data on the display means).

[claim 6]

In regard to Claim 6, Choi et al discloses an apparatus and method further comprising: recording unit adapted to record the encoded image data corresponding to main frame on a storage medium, in response to an operation of a predetermined operation key (Figure 5 element 401 shows the recording apparatus used to record information as further described in Column 7 Lines 33-45).

[claim 7]

In regard to Claim 7, Choi et al discloses an apparatus and method wherein said at least three encoded image data are based SD format of the DV standard (Column 2 Lines 3-12 describes the plural images that are based on the SD format).

[claim 8]

In regard to Claim 8, the claim limitations have been previously discussed in Claim 1.

[claim 11]

In regard to Claim 11, the claim limitations have been previously discussed in Claim 4.

[claim 12]

In regard to Claim 12, the claim limitations have been previously discussed in Claim 5.

[claim 13]

In regard to Claim 13, the claim limitations have been previously discussed in Claim 6.

[claim 14]

In regard to Claim 14, the claim limitations have been previously discussed in Claim 7.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Contact Information

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jamie Vent whose telephone number is 571-272-7384. The examiner can normally be reached on 7:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Miller can be reached on 571-272-7353. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
